DETAILED ACTION*Election/Restrictions*

1. This application contains claims directed to the following patentably distinct species: three distinct embodiments as depicted in figures 1, 2, and 15, respectively. The species are independent or distinct because the embodiments in figures 1 and 15 incorporate the use of P and B frame reference memories (i.e. motion compensation processing), whereas, the embodiment of figure 2, does not. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species by indicating to the Examiner its corresponding figure and associated claims for prosecution on the merits to which the associated claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is considered generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
